

COMPUTER TECHNICIAN

CompTIA A+ is the industry standard for Information Technology (IT) Professionals. This course is designed for people who consider themselves intermediate computer users and can find their way around a computer easily. If you want to dig deeper and gain more knowledge and experience in the IT world then this class is for you.

It will teach students the ins and outs of the computer with detailed lessons on how each part works independently and together to make a complete system. Students will learn and have experience installing and maintaining many different operating systems including Windows 7/8.1/10, Server 2012/2016/2019, macOS, and many versions of Linux. Then students will explore the fields of wired and wireless networking, portable computing and mobile devices, and system security.

This sixteen-week course will help prepare students to be successful in the Technology field of choice and to complete both exams for the CompTIA A+ Certification (Exams 220-1101 & 220-1102). Students who pass the certification test would be fit for jobs such as Help Desk Technician, Desktop Support Administrator, Field Service Technician, and Tier 2 Support Specialist.
