

## COMPTIA™ A+

The CompTIA A+ is the industry standard for IT Professionals. It shows potential employers that the candidate has the ability to support computer and mobile users, problem-solve and troubleshoot any issues that arise, and have the communication and customer interaction skills to be effective in the workplace.

This 16-week course will help prepare students to be successful in the Technology field of choice and to complete both exams for the CompTIA A+ Certification (Exams 220-1001 & 220-1002). It will teach students the ins and outs of the computer with detailed lessons on how each part works independently and together to make a complete system. Students will learn and have experience installing and maintaining many different operating systems including Windows 7/8.1/10, Server 2012/2016/2019, macOS, and many versions of Linux. Then students will explore the fields of wired and wireless networking, portable computing and mobile devices, and system security.

This course is designed for people who consider themselves intermediate computer users who can find their way around a computer easily but are wanting to dig deeper and gain more knowledge and experience in the Information Technology world and gain real-world experience as a technician. Students who pass the certification test would be fit for jobs such as Help Desk Technician, Desktop Support Administrator, Field Service Technician, and Tier 2 Support Specialist.

**Vouchers for both exams are included.**

## Course Schedule
